Detailed Action

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

1. Claims 1-2 and 5 are rejected under 35 U.S.C. 102(e) as being anticipated by Chi et al(US PG-Pub 20020131532 A1). Regarding Claim 1, Chi et al meets the following limitations of the Claim:

selecting a maximum likelihood transport format combination of a plurality of transport format combinations representing bit length combinations constituting a plurality of transport channels, **Abstract; fig 2A**

each having a variable bit length, on the basis of correlation strengths between a normal encoded bit string and bit strings of data obtained by performing Viterbi decoding processing for data, of a reception output constituted by the respective transport channels, **Para 0020, 0075**

which corresponds to an arbitrary transport channel, and estimating a data transmission rate on the basis of the selected combination. **Abstract**

Regarding Claim 2, Chi et al meets the following limitations of the Claim:

further comprising using a plurality of path metric values calculated in the Viterbi decoding processing as values indicating the correlation strengths. **Para 0075**

Regarding Claim 5, Chi et al meets the following limitations of the Claim:

transmission rate estimating means for performing Viterbi decoding processing for data, of a reception output constituted by a plurality of transport channels each having a variable bit length, which corresponds to an arbitrary transport channel, **Para 0020, 0075**

selecting a maximum likelihood transport format combination of a plurality of transport format combinations representing bit length combinations constituting the respective transport channels, thereby estimating a data transmission rate. **Para 0009, Para 0075**

Allowable Subject Matter

2. Claims 6-7 are allowed because Claim 6 includes the recitation of using a maximum path metric, wherein Claims 1 and 5 do not.
3. Claims 3 and 4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
